

Northumbria University Programme Framework for Northumbria Awards - Module Specification

Faculty	Engineering and Environment	Department	BEng (Hons) Mechanical Engineering (Manufacturing Systems and Design), SeoulTech	Subject		Module Tutor	Kwanlae KIM			
Module Title	Capstone Design I (MSDE 322)					Module Code	MSDE 320			
Module Type* (see key below)	STAN									
Module size credits	Level 3:		Level 4:		Level 5:	20	Level 6:		Level 7:	
Home programme/s for which the module is designed			BEng (Hons) Mechanical Engineering (Manufacturing Systems and Design), SeoulTech			Code/s				
Additional Programme/s other than that/those for which the module for specifically designed						Code/s				
Delivery Pattern (Please tick)		Semester based (please specify)	Sem 1 <input type="checkbox"/>	Sem 2 <input checked="" type="checkbox"/>	Year Long	<input type="checkbox"/>	Full-time	<input checked="" type="checkbox"/>	Part-time	<input type="checkbox"/>
Location(s) of delivery: If delivered at EPWO partners please give partner name and location							SeoulTech, Korea (ROK)			
Distance Learning							<input type="checkbox"/>			

***KEY:**

APL Accreditation for prior learning
 CORE PNVQ core skills module
 DISS Dissertation
 FLDW Fieldwork
 INDS Independent study
 MAFOUN MA foundation modules - ASS

P/F Pass/fail module
 P/F_DS Pass/fail dissertation module
 P/F_PJ Pass/fail project module
 P/F_PL Pass/fail placement module
 PLAY Placement – academic study abroad FT
 PLCL Placement – Clinical

PLIN Placement - Industrial
 PRAC Practical
 PROJ Project
 STAN Standard module
 WKBS Work base study
 WORK Workshop

Module Overview (Max 250 words per section) (This section is aimed at providing a prospective or current student with a brief overview of the module in answer to the specific questions and will form an element of the module handbook)

What will I learn on this module? (SRS 0001) Please give a brief indication of the content of the module including the main topic / subject areas studied

You will learn about and demonstrate how to design, build, and test prototypes with real world applications while applying the knowledge and skills developed earlier and concurrently in your degree programme. You will develop your ability to plan, direct, progress and take responsibility for your large-scale design project. The module also enhances your skills for teamwork, cooperation, communication, project management, documentation, presentation, etc. Some students have the opportunity to work with industry members as well as the faculty, which provides valuable experiences in real-world engineering. Capstone projects can lead to new and innovation technologies outside of academia and help students transition to future careers.

How will I learn on this module? (SRS 0002) Please provide a brief overview the learning and teaching approaches the student can expect to experience.

This module will give you the opportunity to learn through the experience of undertaking a large-scale design project under the guidance of an academic supervisor. Each member of a design group has to specify his job description and define his/her individual contribution to the team-based project during the Capstone Design I module. You will also learn presentation and documentation skills with multiple presentations and reports.

How will I be supported academically on this module? (SRS 0003) Please provide a brief overview of the academic support available to students, including any support that may be accessed outside formal scheduled teaching.

On approval an appropriate supervisor is allocated. You will receive feedback on your weekly progress, presentations and final report from your adviser during your supervision sessions. The supervisors offer suggestions but the responsibility for determining the direction of the work and the progress lies with the student. Major presentations are evaluated by all faculty together, and feedbacks are provided to students. The department support a certain amount of fund for each team for purchase.

What will I be expected to read on this module? (SRS 0004) All modules at Northumbria include a range of reading materials that students are expected to engage with. The reading list for this module can be found at: <http://readinglists.northumbria.ac.uk>

(Reading List service online guide for academic staff, this contains contact details for the Reading List team – <http://library.northumbria.ac.uk/readinglists>)

Northumbria University Library Reading List Service (please confirm the following)	Please give date added
A draft reading list has been created and on the university Library Reading List Service	Click here to enter a date.
Reading material has been acquired and digitised (following approval)	Click here to enter a date.
Reading list has been published to students (for module delivery)	Click here to enter a date.

NB – for PFNA alignment process only, module authors should complete either the University Library e-Reading List, or Appendix 1.

Module Learning Outcomes (MLOs) (Max of five in total*, for standard 20-credit modules)
 *this can increase to a maximum of 10, for modules with more than 20 credits

<p>What will I be expected to achieve? (SRS 0005)</p> <ul style="list-style-type: none"> • C4: Select and evaluate technical literature and other sources of information to address complex problems. • C5: Design solutions for complex problems that meet a combination of societal, user, business and customer needs as appropriate. This will involve consideration of applicable health & safety, diversity, inclusion, cultural, societal, environmental and commercial matters, codes of practice and industry standards. • C8: Identify and analyse ethical concerns and make reasoned ethical choices informed by professional codes of conduct. • C9: Use a risk management process to identify, evaluate and mitigate risks (the effects of uncertainty) associated with a particular project or activity. • C10: Adopt a holistic and proportionate approach to the mitigation of security risks. • C11: Adopt an inclusive approach to engineering practice and recognise the responsibilities, benefits and importance of supporting equality, diversity and inclusion. 	<p>How will I be assessed? (SRS 0006) <i>Please give details of all formative and summative assessment process indicating which MLOs will be addressed and how feedback will be provided.</i></p> <p>Formative Assessment You will receive formative feedback on your weekly progress from your adviser during your supervision sessions, this may be verbal, written or electronic.</p> <p>Summative Assessment Component 1: Weekly Reports (1 page) Component 2: Final Report (min 25 pages) & Presentation (20 mins) Component 3: Mid-term Presentation (20 mins)</p>	<p>Programme (Level) Learning Outcomes that this module contributes to: <i>[Please insert PLO number as listed on the programme specification]</i></p> <p>Knowledge & Understanding:</p> <ul style="list-style-type: none"> • KU1: Evaluate and apply complex knowledge of the scientific and mathematical principles of engineering to solve Real-World problems. • KU4: Define and investigate complex problems and constraints that occur in engineering design with the aid of advanced tools. <p>Intellectual / Professional skills & abilities:</p> <ul style="list-style-type: none"> • IPSA1: Apply advanced approaches to solving unfamiliar real world engineering problems. • IPSA4: Ability to create innovative, sustainable critically evaluated solutions to complex engineering problems. <p>Personal Values Attributes (Global / Cultural awareness, Ethics, Curiosity) (PVA):</p> <ul style="list-style-type: none"> • PVA2: Critically analyse advanced solutions to complex engineering problems.
---	--	---

<ul style="list-style-type: none"> • C14: Discuss the role of quality management systems and continuous improvement in the context of complex problems. • C15: Apply knowledge of engineering management principles, commercial context, project and change management, and relevant legal matters including intellectual property rights. • C18: Plan and record self-learning and development as the foundation for lifelong learning/CPD. 		
---	--	--

<p>Pre-requisite(s) (SRS 0007) Any module which must already have been taken, or any stipulated level of prior knowledge required in order to study this module, (co-requisite core models need not be listed)</p>	<ul style="list-style-type: none"> - MSDE 240 (Electronic Circuits) - MSDE 220 (CAD I) - MSDE 323 (Design of Machine Element) - MSDE 231 (Introduction to Manufacturing) - MSDE 324 (Intermediate Engineering Design)
<p>Co-requisite(s) (SRS 0008) Modules at this level which must be taken with this module</p>	

<p>Module abstract (SRS 0009) Please provide a brief a brief abstract of the module (150 words max). This section acts as the 'shop window' for the module, therefore it needs to engage and inspire the student. This is the first thing that the student will read about this module, so it must immediately grab their attention. The main aim is to encourage the student to read on, however the summary should be written in such a way that if the student reads nothing else this section will convey all key messages and benefits that the module will offer. Start by explaining the module title where necessary. Then highlight any selling points relating to the four pillars: Research-Rich Learning; Technology Enhanced Learning; Assessment and Feedback; Employability and Entrepreneurship. Examples may include student satisfaction rates, learning environment, state-of-the-art facilities etc. Finally indicate benefits of the module such as the key skills that the students will gain for future employment and career paths that are open to them.</p>
<p>This module is designed to consolidate students' learning with valuable hands-on experiences to help develop them into well-prepared and</p>

well-rounded graduates. This module aims to introduce students to the principles of successful engineering design and to guide students through a practical design experience. It also provides experience of undertaking a complete team-based individual design project, allowing them to understand their individual nature within a group when undertaking a significant investigation. This module is the contribution to two-part design modules in series. Capstone Design I (MSDE 322) specifies the group project and allocates individual component projects. Capstone Design II (MSDE 423) individual project performed by individuals on a particular part of the overall project.

Programme Framework for Northumbria Awards Research Rich Learning Design Pillar (SRS 0090)

Embedding Research Rich Learning into the curriculum: Indicate how students will be actively engaged in research rich learning in this module through: research/enquiry based learning, research tutored learning, research led learning and/or research oriented learning, providing a brief overview of how this / these will feature within the delivery of the module **(250 words max)**

Note:

- **Research/enquiry Based:** L&T_Based on student-centred enquiry and research activities (conducting research).
- **Research Tutored:** L&T Emphasises learning focused on students actively discussing research, and critically engaging with research outputs
- **Research Led:** T&L structured around subject content and that content is based on the research (learning about research)
- **Research Orientated:** T&L Emphasises understanding of the knowledge production process, and methods of enquiry in the subject (learning how to research)

As research may be described as creating and finding new knowledge or using new knowledge to reach and support decisions, your investigation will draw upon all four modes of Research Rich Learning. This may be through the use of existing knowledge to define and plan your Capstone Design project; understanding new knowledge is created in your discipline area; creating new knowledge during your Capstone Design project and practical works; developing your skills of enquiry, practical working, data analysis, prototyping, etc.; and presenting and documenting the results of your process of knowledge creation.

Notional Student Workload (NSW) for each mode of delivery

<i>Complete for each delivery mode where the distribution of NSW</i>

Appendix 1

Indicative Reading for PFNA alignment approval only *(to be completed only if e-reading list unavailable at point of alignment approval)*

N.B. This outline indicative reading list will be utilised for approval purposes only, and **a full e-reading list must be produced and available by the June of the academic year prior to the first delivery date of the module** (at which point the section of p.2 referring to University Library Reading Lists should be completed).

Please list below essential key text underpinning the module content and ultimately the learning outcomes:

- 1) Shigley's Mechanical Engineering Design, Richard G. Budynas and J. Keith Nisbett, 8th Edition, 2008
- 2) Product Design and Development by Karl T. Ulrich and Steven D. Eppinger (McGraw-Hill 2008)
- 3) Control Systems Engineering 4th Edition, Norman S. Nise, Wiley, 2003
