

Northumbria University Programme Framework for Northumbria Awards - Module Specification

Faculty	Engineering and Environment	Department	BEng (Hons) Mechanical Engineering (Manufacturing Systems and Design), SeoulTech	Subject		Module Tutor	Hyuk Dong KWON				
Module Title	Introduction to Manufacturing					Module Code	MSDE 231				
Module Type* <small>(see key below)</small>	STAN										
Module size credits	Level 3:		Level 4:	10	Level 5:		Level 6:		Level 7:		
Home programme/s for which the module is designed				BEng (Hons) Mechanical Engineering (Manufacturing Systems and Design), SeoulTech			Code/s				
Additional Programme/s other than that/those for which the module for specifically designed							Code/s				
Delivery Pattern (Please tick)		Semester based <i>(please specify)</i>		Sem 1 <input type="checkbox"/> Sem 2 <input checked="" type="checkbox"/>		Year Long		<input type="checkbox"/>	Full-time Part-time Distance Learning		<input checked="" type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
Location(s) of delivery: If delivered at EPWO partners please give partner name and location								Mugung Hall (Seoultech)			

***KEY:**

APL Accreditation for prior learning	P/F Pass/fail module	PLIN Placement - Industrial
CORE PNVQ core skills module	P/F_DS Pass/fail dissertation module	PRAC Practical
DISS Dissertation	P/F_PJ Pass/fail project module	PROJ Project
FLDW Fieldwork	P/F_PL Pass/fail placement module	STAN Standard module
INDS Independent study	PLAY Placement – academic study abroad FT	WKBS Work base study
MAFOUN MA foundation modules - ASS	PLCL Placement – Clinical	WORK Workshop

Module Overview (Max 250 words per section) (This section is aimed at providing a prospective or current student with a brief overview of the module in answer to the specific questions and will form an element of the module handbook)

What will I learn on this module? (SRS 0001) Please give a brief indication of the content of the module including the main topic / subject areas studied	
The characteristics of the whole manufacturing process methodologies such as machining, casting, metal forming, and rapid prototyping are covered, along with the related processes and techniques such as surface finishing, electronic fabrication, automation and integration of the production systems.	
How will I learn on this module? (SRS 0002) Please provide a brief overview the learning and teaching approaches the student can expect to experience.	
This module is delivered by regular lectures during the lectures. Student design group will also have a hands-on experience with project of machining operation using their own engineering drawings.	
How will I be supported academically on this module? (SRS 0003) Please provide a brief overview of the academic support available to students, including any support that may be accessed outside formal scheduled teaching.	
During your active learning sessions, academic support will be available to facilitate your exploration of the problem-solving activities. Formative feedback will be provided by the module team, including answering student queries and providing guidance concerning the module such as assessments and your academic progress. The electronic learning platform (eLP) provides a comprehensive resource for integrated learning incorporating learning materials and reading lists that will facilitate directed and self-directed learning. Contact with academic tutors and your peers outside formal teaching hours is encouraged through dedicated 'office hours', discussion boards and messaging systems within the eLP. Professional support staff provide the first point of contact for a range of queries, including, for example, those concerning assessment submission, late submission/extensions, and other administrative issues.	
What will I be expected to read on this module? (SRS 0004) All modules at Northumbria include a range of reading materials that students are expected to engage with. The reading list for this module can be found at: http://readinglists.northumbria.ac.uk (Reading List service online guide for academic staff, this contains contact details for the Reading List team – http://library.northumbria.ac.uk/readinglists)	
Northumbria University Library Reading List Service (please confirm the following)	Please give date added
A draft reading list has been created and on the university Library Reading List Service	Click here to enter a date.
Reading material has been acquired and digitised (following approval)	Click here to enter a date.
Reading list has been published to students (for module delivery)	Click here to enter a date.

NB – for PFNA alignment process only, module authors should complete either the University Library e-Reading List, or Appendix 1.

Module Learning Outcomes (MLOs) (Max of five in total*, for standard 20-credit modules)
**this can increase to a maximum of 10, for modules with more than 20 credits*

<u>What will I be expected to achieve?</u> (SRS 0005)	<u>How will I be assessed?</u> (SRS 0006) <i>Please give details of all formative and summative assessment process indicating which MLOs will be addressed and how feedback will be provided.</i>	<u>Programme (Level) Learning Outcomes that this module contributes to:</u> <i>[Please insert PLO number as listed on the programme specification]</i>
<ul style="list-style-type: none"> • C2: Analyse complex problems to reach substantiated conclusions using first principles of mathematics, statistics, natural science and engineering principles • C5: Design solutions for complex problems that meet a combination of societal, user, business and customer needs as appropriate. This will involve consideration of applicable health & safety, diversity, inclusion, cultural, societal, environmental and commercial matters, codes of practice and industry standards • C7: Evaluate the environmental and societal impact of solutions to complex problems and minimise adverse impacts • C12: Use practical laboratory and workshop skills to investigate complex problems 	<p>Formative Assessment Academic staff on the module will assess you in a formative manner to help build your confidence and highlight any misunderstandings you may have of the theoretical and professional concepts presented in the module. Your formative feedback will be given to you either verbally by academic staff on the module during formally scheduled teaching sessions. Your formative feedback aims to help you learn and prepare for the submission of your summative assessment.</p> <p>Summative Assessment Academic staff on the module will assess you in a summative manner by three pieces of assessment:</p> <p>Component 1, written examination, is to assess your knowledge and understanding manufacturing technology and the solution of complex problems through analytical techniques (C2 &C7).</p> <p>Component 2, presentation, is used to evaluate your ability to apply creativity and curiosity to analyse well-defined manufacturing technology problems reaching</p>	<p>Knowledge & Understanding:</p> <ul style="list-style-type: none"> • KU1. Evaluate and apply complex knowledge of the scientific and mathematical principles of mechanical engineering to solve Real-World problems. • KU3. Introduce and utilise complex methodologies to create solutions to a variety of Real-World engineering problems. <p>Intellectual / Professional skills & abilities:</p> <ul style="list-style-type: none"> • IPSA1. Apply advanced approaches to solving unfamiliar real world mechanical engineering problems. <p>Personal Values Attributes (Global / Cultural awareness, Ethics, Curiosity) (PVA):</p> <ul style="list-style-type: none"> • PVA2. Critically analyse advanced solutions to complex engineering problems.

	<p>substantiated conclusions meeting module learning outcomes C2 & C5.</p> <p>Component 3, group report, will evaluate your ability to use appropriate computational and analytical techniques to model well-defined manufacturing technology problems meeting module learning outcomes C5 & C12.</p> <p>Feedback will be provided by returning marked results with comments.</p>	
--	---	--

Pre-requisite(s) (SRS 0007) Any module which must already have been taken, or any stipulated level of prior knowledge required in order to study this module, (co-requisite core models need not be listed)	N/A
Co-requisite(s) (SRS 0008) Modules at this level which must be taken with this module	N/A

Module abstract (SRS 0009)

Please provide a brief a brief abstract of the module (150 words max). This section acts as the 'shop window' for the module, therefore it needs to engage and inspire the student. This is the first thing that the student will read about this module, so it must immediately grab their attention. The main aim is to encourage the student to read on, however the summary should be written in such a way that if the student reads nothing else this section will convey all key messages and benefits that the module will offer. Start by explaining the module title where necessary. Then highlight any selling points relating to the four pillars: Research-Rich Learning; Technology Enhanced Learning; Assessment and Feedback; Employability and Entrepreneurship. Examples may include student satisfaction rates, learning environment, state-of-the-art facilities etc. Finally indicate benefits of the module such as the key skills that the students will gain for future employment and career paths that are open to them.

This module helps students to understand the science and engineering knowledge and theories of manufacturing technology. Students learn about material properties and product attributes, engineering materials, solidification processes, particulate processing of metals and ceramics, metal forming and sheet metalworking, material removal processes, rapid prototyping, and modern manufacturing processes.

Programme Framework for Northumbria Awards Research Rich Learning Design Pillar (SRS 0090)

Embedding Research Rich Learning into the curriculum: Indicate how students will be actively engaged in research rich learning in this module through: research/enquiry based learning, research tutored learning, research led learning and/or research oriented learning, providing a brief overview of how this / these will feature within the delivery of the module **(250 words max)**

Note:

- **Research/enquiry Based:** L&T_Based on student-centred enquiry and research activities (conducting research).
- **Research Tutored:** L&T Emphasises learning focused on students actively discussing research, and critically engaging with research outputs
- **Research Led:** T&L structured around subject content and that content is based on the research (learning about research)
- **Research Orientated:** T&L Emphasises understanding of the knowledge production process, and methods of enquiry in the subject (learning how to research)

In this module, research tutored and research led learning will be demonstrated by investigation and analysis on the modern manufacturing processes. In the Capstone design project, knowledge on manufacturing technology are strong basis for deciding and selection of materials, tolerances, surface finishing of parts and geometries.

Notional Student Workload (NSW) for each mode of delivery

Complete for each delivery mode where the distribution of NSW Full Time Mode of Delivery				Part Time Mode of Delivery

Appendix 1

Indicative Reading for PFNA alignment approval only *(to be completed only if e-reading list unavailable at point of alignment approval)*

N.B. This outline indicative reading list will be utilised for approval purposes only, and **a full e-reading list must be produced and available by the June of the academic year prior to the first delivery date of the module** (at which point the section of p.2 referring to University Library Reading Lists should be completed).

Please list below essential key text underpinning the module content and ultimately the learning outcomes:

- 1) Fundamentals of Modern Manufacturing (Materials, Processes, and Systems) The 3rd Edition by Mikell P. Groover, 2007.
- 2) Introduction to Manufacturing Processes 3rd Edition, John A. Schey, McGraw Hill, 1999
